Parts supplied: Yes

Purpose: Saddle Horn Extension

In order to reduce the space between the lap bar and the saddle horn on the ReMix II seat, Tivoli Mfg. Ltd. has developed a fiberglass extension cap to be installed over the existing saddle horn on all ReMix II rides in operation. This extension will remove the possibility of a leg passing between the lap bar and the saddle horn when the lap bar is in the secondary lock position.

Extension kits are available through Tivoli's USA Representative WorldRide Service & Supply Inc., by contacting 817-6412-5045 or email: worldride@sbcglobal.net .

The horn extensions are installed by first applying a coating of general purpose epoxy to the top portion of the existing saddle horn. Apply a liberal amount of silicone adhesive around the base flange and screw holes. Push the extension over the existing horn and pilot drill all screw holes prior to installing 3 countersunk stainless steel screws in back and 3 pan head stainless steel screws in front. When the horn is screwed in place wipe excess silicone from flange.
